

# Food Web Connections!

## Directions:

1. Cut out or draw pictures of animals that live together in one ecosystem.
2. Glue them in a circle order around a paper plate.
3. Cut two small slats in the edge of the plate by each animal.

4. Use yarn to represent the sun's energy, start with a plant and connect each animal or plant.

Animals and plants can be connected by what they eat or how they use a plant.

How many different ways can you connect your species???
